Stakeholder Map

Who has a stake? · Revision 37

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia Voss is the Night QA Supervisor and can explain how the cell is used during her shift and review whether the proposed record-checking workflow fits QA work. Night-shift operators perform checks and record exceptions, so they need to participate in the review. Nia requests that an operator be included, but that person has not yet been selected or interviewed. Nia also needs original evidence preserved and review sessions scheduled around shift duties. The current record contains Nia’s account, not interviews with every operator. Nia’s authority to approve funding or a restart is not established. (W03-S01)

Engineering

Elias Chen is the Robotics Systems Engineer. He can explain the available command and scheduler records and review technical interpretations. He needs read-only exports with source details and wants the record custodian included in an access discussion before delivery dates are promised. The current evidence does not let him identify the origin of the repeated command. Elias can advise on technical feasibility, but his expertise does not establish record ownership or authority to approve spending or a restart. (W03-S02)

Operations

Mara Ilyan is the Production Operations Manager. She will carry the Week 2 recommendation into a review of whether to proceed, revise, defer, or decline the proposed QA Control Review. Operations needs a clear decision route and a summary of the people who must be consulted. Mara can seek confirmation of missing contacts and coordinate the recommendation, but the record does not establish her as the spending approver. The authorizing sponsor's identity and approval limits still need to be confirmed. (W03-S04)

Sponsor and record custodian

The authorizing sponsor is responsible for approving the proposed work within the organization's approval process, but the source does not identify the person holding that role or confirm their approval limits. A signed approval is also missing. The record custodian is responsible for the records, but no named contact or confirmation that the person accepted this responsibility is provided. Mara should help identify the sponsor and custodian, confirm their responsibilities directly, and document their responses and any supporting records. We should not assume that Mara is the sponsor or that a person listed in a meeting record has accepted responsibility. (W03-S03)

2. Relationships and next steps

Competing needs and tradeoff

Mara proposes a single daytime meeting, while Nia requests participation from the night shift. A daytime meeting may be convenient for some participants but could miss important information from operators who perform the checks and record exceptions. A possible solution is to hold the main daytime meeting and arrange a short, shift-specific interview with a night-shift operator. We should confirm the schedule with Mara and Nia before treating this plan as agreed. (W03-S01; W03-S04)

Consultation plan

Consult Nia Voss about QA procedures, evidence preservation, and shift requirements through an interview. Select a night-shift operator and ask them to explain the actual workflow and how exceptions are recorded. Consult Elias Chen about technical interpretations and the information needed from the system records. Ask the record custodian to confirm ownership, access requirements, and availability before promising delivery dates. Consult Mara Ilyan about Operations requirements and the route for submitting recommendations. Identify the authorizing sponsor and confirm that person's decision-making authority and approval limits. Use interviews for individual needs and a follow-up meeting to compare findings. Operators need a voice because they perform the work and understand the shift-specific process, even if they lack formal budget authority. Record unresolved questions rather than assuming agreement. (W03-S01; W03-S02; W03-S03; W03-S04)

Missing voices and validation

Two important questions remain unresolved. First, who is the record custodian, and have they accepted responsibility for providing access to the records? Second, who is the named authorizing sponsor, and what are their approval limits? Mara should seek confirmation from the relevant organizational contacts. The team should record their names, responsibilities, answers, and supporting records. A night-shift operator must also be selected and interviewed because the current QA account does not represent every operator. Missing information or silence should not be treated as consent. (W03-S01; W03-S02; W03-S03; W03-S04)

Next step toward requirements

Before detailed requirements interviews begin, confirm the identity and responsibilities of the record custodian and authorizing sponsor, select a night-shift operator to participate, and agree on a consultation schedule that includes the affected shifts. Verify the sponsor's approval limits and the custodian's responsibility for records. Use the stakeholder map to invite the appropriate people, document their needs, and distinguish technical advice from decision authority. The map supports planning and consultation; it does not approve the proposed project or authorize a restart. (W03-S01; W03-S02; W03-S03; W03-S04)

3. Book evidence connection

Book form connection

The tools and questions helped me improve my consultation plan by making sure the right people have a chance to contribute. The stakeholder map helps identify each person’s role, the interview guide helps gather their knowledge and concerns, and the workflow checklist helps the team understand how QA checks are actually performed. The responsibility register also helps distinguish technical advice from approval authority. These tools will help us include a night-shift operator, confirm missing responsibilities, and make a better-informed recommendation.
